

TV Week 11

Aerospace Engineering

Aerospace n. /ˈeəɹəʊspeɪs/ (аэрокосмическая отрасль)	the industry of building aircraft, vehicles and equipment to be sent into space	aerospace industry
Aeronautical adj /ˌeəɹəˈnɔːtɪkl/ (авиационный)	connected with the science or practice of building and flying aircraft	an aeronautical engineer
Aerodynamics n /ˌeəɹəʊdaɪˈnæmɪks/ (аэродинамика)	[plural] the qualities of an object that affect the way it moves through the air [uncountable] the science that deals with how objects move through air	Research has focused on improving the car's aerodynamics .
Propulsion n. /prəˈpʌlʃn/ (движущая сила, тяга)	the force that drives something forward	The fish uses its tail fins for propulsion through the water.
Astro- /ˌæstrəˈ/ (астро-; звёздный, космический)	relating to the stars or outer space	Astronaut, astrophysics
Astronautical adj /ˌæstrəˈnɔːtɪkəl/ (космонавтический)	pertaining to astronautics or astronauts	astronautical engineering

Video. How do self-Driving Cars See?

Watt n. /ˈwɒt/ (ватт)	a unit for measuring electrical power	<i>a 60-watt light bulb</i>
------------------------------------	--	-----------------------------

Split v. <i>/split/</i> (разделять)	to divide, or to make something divide, into two or more parts	The teacher split the children (up) into three groups.
Arm (of a machine) n. <i>/ɑ:m/</i> (рычаг, манипулятор)	a long narrow part of an object or a machine, especially one that moves	The robotic arm meticulously assembled components on the factory line.
Pulse (of) n. <i>/pʌls/</i> (импульс)	a single short increase in the amount of light, sound or electricity produced by a machine, etc.	The machine beeped with a quick pulse , showing its brief burst of activity.
Laser n. <i>/ˈleɪzə(r)/</i> (лазер)	a device that gives out light in which all the waves oscillate (= change direction and strength) together, typically producing a powerful beam of light that can be used for cutting metal, in medical operations, etc.	The laser cut through the metal with precision.
Radio antenna n. <i>/ænˈtenə/</i> (радиоантенна)	a piece of equipment made of wire or long straight pieces of metal for receiving or sending radio and television signals	The radio antenna on the rooftop picked up clear signals.
Glean v. <i>/gli:n/</i> (собирать сведения)	to obtain information, knowledge, etc., sometimes with difficulty and often from various different places	He gleaned useful tips from online tutorials to improve his photography skills.
Navigate v. <i>/ˈnævɪgeɪt/</i> (ориентироваться, прокладывать курс)	to plan and direct the course of ship, plane, car etc., for example by using a map	Even ancient ships were able to navigate large stretches of open water.
Obstacle n. <i>/ˈɒbstəkl/</i> (препятствие)	an object that is in your way and that makes it difficult for you to move forward	The biggest obstacle in our way was a tree trunk in the road.

Onslaught <i>n.</i> /'ɒnsləʊt/ (натиск, наплыв)	a strong or violent attack	With the nice weather, the beach towns are expecting an onslaught of tourists.
Emit <i>v.</i> /i'mɪt/ (излучать, испускать)	to send out something such as light, heat, sound, gas, etc.	The alarm emits infrared rays which are used to detect any intruder.
Ray <i>v.</i> /reɪ/ (луч)	a narrow line of light, heat or other energy	Light rays bend as they pass from air to water.
Bounce <i>v.</i> /baʊns/ (отскакивать, возвращаться)	bounce (something) (back) if an email bounces or the system bounces it, it returns to the person who sent it because the system cannot deliver it	I bounced back pretty quickly after my operation.
Parallel <i>adj.</i> /'pærəlel/ (параллельный)	two or more lines that are parallel to each other are the same distance apart at every point	The river is parallel to Green Street.

Article. Self-Driving Cars.

Autonomous <i>adj.</i> /ɔ:'tɒnəməs/ (автономный, беспилотный)	(of a vehicle) that has the technology to drive itself without a person in control	The company is investing heavily in the development of autonomous drones.
Automotive <i>adj.</i> /ɔ:tə'mæʃtɪv/ (автомобильный)	relating to vehicles that are driven by engines	The automotive industry is constantly innovating to enhance fuel efficiency.
Automatic <i>adj.</i> /ɔ:tə'mætɪk/ (автоматический)	(of a machine, device, etc.) having controls that work without needing a person to operate them	The automatic door slid open as soon as the motion sensor detected someone approaching.
Dense <i>adj.</i> /dens/ (плотный, густой)	containing a lot of people, things, plants, etc. with little space between them	They had to clear a road through an area of dense forest.

Interference n. /ˌɪntəˈfɪərəns/ (помехи)	interruption of a radio signal by another signal on a similar wavelength, causing extra noise that is not wanted	The radio broadcast experienced interference from a nearby transmitter on a similar frequency, resulting in disruptive static and unwanted noise for the listeners.
Latency n. /ˈleɪtənsi/ (задержка передачи данных)	(computing) the delay before data begins to move after it has been sent an instruction to do so	The video call had a noticeable latency , causing a delay between spoken words and their transmission.
Delay n. /dɪˈleɪ/ (задержка)	[uncountable] failure to do something quickly or at the right time; the act of delaying	If you delay now, the opportunity might be lost.
Visibility n. /ˌvɪzəˈbɪləti/ (видимость)	how far or well you can see, especially as affected by the light or the weather	Blowing snow made for poor visibility on the roads last night.
Deployment n. /dɪˈplɔɪmənt/ (развёртывание, применение)	(formal) the act of using something effectively	staff deployment
Use case n. /ˈjuːs keɪs/ (сценарий использования)	a specific situation in which a product or service could be used	There are lots of use cases for robotic hardware, from helping disabled users to automating factories.
Rethink n. /ˈriːθɪŋk/ (переосмысление)	an act of thinking again about an idea, a course of action, etc., especially in order to change it	This new information means we should have a rethink .
Regulator n. /ˈregjuleɪtə(r)/ (регулирующий орган)	a person or an organization that officially controls an area of business or industry and makes sure that it is operating fairly	Federal regulators prepare to set stricter rules for cars and fuel.
Manual adj. /ˈmænjʊəl/ (ручной)	- involving using the hands or physical strength - operated or controlled by hand rather than by machine or using electricity, etc.	He still works on an old manual typewriter.

Ubiquitous <i>adj.</i> /ju:'bɪkwɪtəs/ (повсеместный)	seeming to be everywhere or in several places at the same time; very common	His ubiquitous influence was felt by all the family.
Sensor <i>n.</i> /'sensə(r)/ (датчик)	a device that can react to light, heat, pressure, etc. in order to make a machine, etc. do something or show something	Motion/radiation/humidity sensors .
Wavelength <i>n.</i> /'weɪvlɛŋkθ/ (длина волны)	the distance between two similar points on a wave of energy, such as light or sound	Light must be maintained at a certain wavelength to destroy bacteria.
Beam <i>n.</i> /bi:m/ (луч, пучок)	a line of light, electromagnetic waves or particles	The flashlight's beam illuminated the dark path.
Infrastructure <i>n.</i> /'ɪnfəstrʌktʃə(r)/ (инфраструктура)	the basic systems and services that are necessary for a country or an organization to run smoothly, for example buildings, transport and water and power supplies	More money is needed to maintain the city's infrastructure .
Radar <i>n.</i> /'reɪdɑ:(r)/ (радар, радиолокатор)	a system that uses radio waves to find the position and movement of objects, for example planes and ships, when they cannot be seen	Other vessels in the area show up on the ship's radar .
