

HA for Week 6-7

Usability and User Experience

Wording (n.) [ˈwɜːdɪŋ] (формулировка, выбор слов)	something used in a piece of writing or speech (especially when they have been carefully chosen)	The precise wording of the technical manual was crucial for ensuring that engineers understood the assembly instructions correctly.
Imagery (n.) [ˈɪmɪdʒəri] (образность, образы)	language that produces pictures in the minds of people reading or listening	The use of advanced imagery techniques in engineering allowed for more accurate visualizations of complex systems.
Entail (v.) [ˈenteɪl] (влечь за собой, предполагать)	to make something necessary, or to involve something.	The new design entails significant changes to the existing manufacturing process, requiring additional training for staff.
Refinement (n.) [rɪˈfaɪnmənt] (доработка, улучшение)	a small change to something that improves it	The refinement of the algorithm led to a substantial improvement in the efficiency of the data processing system.
Assumption (n.) [əˈsʌmpʃn] (предположение, допущение)	something that you accept as true without question or proof:	Based on the assumption that the material properties would remain consistent, the engineers proceeded with the prototype development.
Leverage (v.) [ˈliːvərɪdʒ] (использовать с выгодой)	to use something that you already have in order to achieve something new or better	By leveraging advanced technologies, the company was able to reduce production costs and increase market competitiveness.
Span (v.) [spæn] (охватывать, простирается через)	if something <u>spans</u> a range of things, all those things are included in it.	An old bridge spans the river just outside the town.
Wireframe (n.) [waɪəriˈfreɪm] (схематичный макет интерфейса)	a visual representation of the structure of a web page	The team created a detailed wireframe model to visualize the layout and functionality of the new software interface.

Mockup (n.) ['mɒkʌp] (макет)	a full-size model of something large that has not yet been built, showing how it will look or operate	A mockup of the product was presented to stakeholders to gather feedback before moving to the production phase.
Workflow (n.) ['wɜ:kfləʊ] (рабочий процесс)	the order of the stages in a particular work process	Implementing a streamlined workflow allowed the engineering team to complete projects more efficiently and meet tight deadlines.
Narrative (n.) ['nærətɪv] (повествование, история)	a story or an account of a series of events.	The narrative behind the innovative product design highlighted the importance of user-centered engineering principles.
Roadblock (n.) ['rəʊdblək] (препятствие)	a difficulty or obstacle to progress	The lack of funding became a significant roadblock in the development of the new technology, requiring the team to seek additional investment.
Ergonomic adj /,ɜ:gə'nomɪk/ (эргономичный) Ergonomics n. (эргономика) Ergonomist n. (специалист по эргономике)	designed to make people's working environment more comfortable and to help them work more efficiently	• ergonomic design • an ergonomic keyboard/chair
Scanner n. /'skænə(r)/ (сканер)	1. a device for examining something or recording something using light, sound or X-rays 2. enlarge image (computing) a device which copies pictures and documents so that they can be stored on a computer	• The identity cards are examined by an electronic scanner. • a document scanner
